

1                                   ABSTRACT OF THE DISCLOSURE

2           A media enhancement system and method, the system including  
3   a media player structured to deliver a media selection to a user  
4   and an enhancement registry associated with the media selection  
5   and including time data and/or other data associated with the  
6   media selection and a communicative link to additional  
7   materials. A user interface is further provided and operatively  
8   associated with the media player to receive a user input during  
9   delivery of the media selection by the media player, the media  
10  player further structured to identify a corresponding time  
11  marker of the media selection at a time that corresponds receipt  
12  of the user input. Finally, an activation assembly is provided  
13  to access the enhancement registry and to correspondingly  
14  activate the communicative link for delivery of the additional  
15  materials to the user.
